

Magnum Energy (Sensata) is currently experiencing extended lead times before their inverters ship. They are approximately two to six months behind in production. We understand it can be frustrating to wait that long, so we compiled a list of our recommended alternatives to the Magnum inverters. The Victron and Schneider Electric inverters are readily available.

NOTE: These inverters are suggestions. They are not exactly the same as the Magnum inverters but should provide a similar level of performance. If you're not sure about which model you need or if you have any questions about the various models or features, please email us or give us a call. One of our solar application engineers will be happy to help you.
