

SYSTEM DESIGN

Yes, we design solar power systems. For free. It's what we do.

Residential. Commercial. Industrial.

We work with everyone. From beginner DIYers to professional installers. Our team of Solar Application Engineers works as a team when necessary to solve the most complex design issues you can think of.

Every project is designed for that specific customer, their power needs, their location, their preferences, and their budget. There are no cookie-cutter solutions to solar. We offer a variety of resources to help you, but you can always talk to our team at any stage of the process.

Here's how it works:

First, our team will ask you a series of questions that will help us determine what your needs are. Questions like:

- What are your goals for your system?
- What type of system are you looking at?
- Will you need battery storage?
- Where is the system going to be geographically located?
- How will you be mounting panels? Ground, your roof, both, other?
- How much energy do we need to offset or account for?
- What sort of space are you working with?
- Do you have a budget?
- Do you anticipate needing to expand the system in the future?

Then, our team will engineer a solution, taking all the above information into account, including an estimate (bill of materials) with a list of recommended products that we believe will best meet your needs and your budget.

Once the design is finalized, our team will walk with you every step of the way. We will make sure that you get all of the support you need, not just with the purchase of your system, but continuing for the *lifetime* of your system. This includes advising on the installation and commissioning, as well as the setup of your remote monitoring system (if applicable).

Even after your system is live, we are always available for troubleshooting or advice on how to improve the performance of your system. All you have to do is give us a call.

Why NAZ Solar Electric?

For over 40 years, we've designed systems and provided technical support for residential and commercial customers across the globe.

Our passion has always been to take this natural, renewable resource and make it accessible.
